Sr.	Field	Question	Your answer
	FINDABILITY	Assessment of how easily data can be found by both humans and computers	
1	Persistent Identifier	Does your service assign persistent identifiers to datasets?	
2	Rich Metadata	Does your service provide rich metadata?	
3	Indexed In Search Engines	Is your metadata indexed in major search engines?	
4	Metadata Schema	Does your database use formal or standard metadata schemas?	
5	Metadata Persistence	Is your metadata persistently available over time?	
	ACCESSIBILITY	Assessment of how data can be retrieved and accessed	
1	Retrieval Protocol	Is there a standard protocol available for data retrieval?	
2	Authentication Required	Does your database require authentication for data access?	
3	Authentication Type	If yes, what type of authentication is used?	
4	Metadata Always Available	Is metadata always accessible, even if the data is restricted?	
5	Data Availability	Is the actual data accessible (open or controlled access)?	
	INTEROPERABILITY	Assessment of how data can be integrated with other data	
1	Knowledge Representation	Do you use formal knowledge representation (e.g., ontologies, RDF)?	
2	Vocabularies Used	Do you enforce the use of controlled vocabularies for data submission?	
3	Qualified References	Do you validate and qualify references (e.g., external IDs) before data submission?	
4	Api Availability	Do you provide a dedicated API for data access?	
5	Data Formats	Do you use standardized data formats in your database or API?	
	REUSABILITY	Assessment of how well data can be reused	
1	License Clarity	Does your database clearly state licenses for data reuse?	
2	Provenance Info	Do you provide provenance information?	
3	Community Standards	Do your data formats adhere to community standards?	
4	Documentation Quality	Do you provide documentation for using your database?	
5	Citation Guidelines	Have you clearly stated citation guidelines?
